

Revit®

models available from **COOK**

Autodesk® Revit® families are available for all **COOK** ventilation products. Every 3D parametric family is a full-scale representation of the product and contains all sizes and configurations available. Each family includes connector elements for ductwork, electrical, controls and mounting (where applicable). User defined attributes are included for airflow, static pressure, RPM, horsepower, voltage, phase, etc.

Designers with Autodesk® Revit® can easily access these files on the **COOK** website www.lorencook.com. Simply click on the "Design Tools" link to download and utilize these (.rfa) files on your mechanical drawings.
